

Drive With Data:
Enterprise Data to
Secure & Optimize
Operations

Access Data Has Been Left in the Dark

For many years, the access control industry has been sitting on a trove of valuable facility utilization, user behavior and operational trend data. However, the industry has generally failed to deliver the valuable insights that can be derived from collecting and harnessing the data around the physical space.

Because the industry has been late to adopt cloud infrastructure for security, many rely on legacy on-premise solutions scattered across individual office locations, hindering their ability to understand and properly use physical facility access data.

The result is enterprises with traditional access control solutions cannot leverage powerful access intelligence to vastly improve the physical management and security of their businesses.

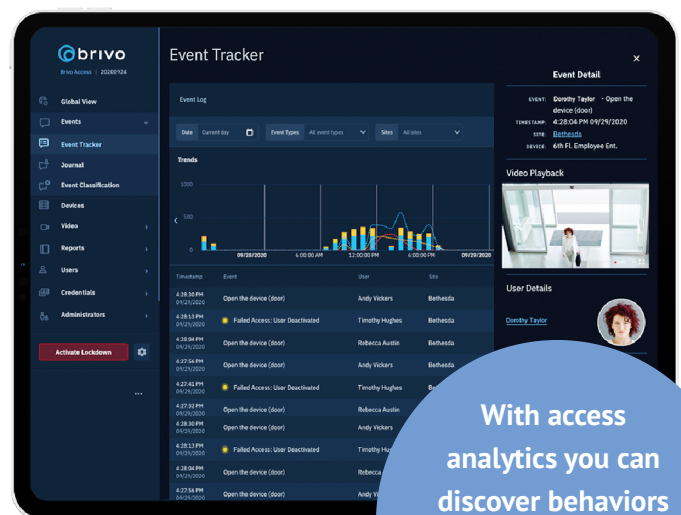

Albert Einstein famously said, "Not everything that can be counted counts, and not everything that counts can be counted."

How Does Access Data Help Me Keep My Employees Safe?

Every day, CISOs, CSOs, and their teams are challenged to discover hazards, assess risk, and respond appropriately. Mitigating risk requires insight into thousands of employees across many locations and access points. The ability to filter out regular and benign access activity allows you to drill down into anomalies and see what is happening and who is doing it.

In addition to identifying malicious activities, access data can reveal suspicious behavior, patterns, and general non-compliance with the regulations. Armed with knowledge, you may take proactive steps to reduce risk.

Most access control systems log events. Those technologies generally provide a live feed of the event without trends or context. This point-in-time approach makes it harder to see trends and spot abnormalities amongst the regular traffic.

With access analytics you can discover behaviors that are hidden among everyday activities

How to Unlock the Power of Data?

Small adjustments in energy and space usage may have a big impact on the bottom line. The problem has been gathering real-time and trending insights to discover space optimization options. Until now.

Using access control data, you can identify which areas of your physical space are being used, by whom, and for how long. It's a game changer to use real-time access data to cut off lights and lower air conditioning and augment staff needs based on access trends. These real-world examples show how access data not only protects your assets, but also can save money.

In the post-pandemic era, many organizations are concerned about space use, distancing, and managing a hybrid work environment. Because corporate spaces will continue to change as hybrid models become the norm, keeping an eye on space utilization will be critical in the future.

Brivo Access Enterprise Solution

Brivo Access Enterprise Edition with Data Explorer is the first data analytics solution built for enterprise businesses.

Data Explorer offers a visual representation of your access data within Brivo Access. No need for data scientists to use Data Explorer to monitor building activities, usage trends, and potential security risks across your enterprise. With Data Explorer, there is no need to export data or create difficult Excel formulae. You can use data to improve security, reduce risk, and optimize facility operations.

Key Benefits

Brivo Access for Enterprises

Brivo Access Enterprise Edition is an enterprise-grade access control solution designed for businesses with multiple access points. This advanced edition provides a comprehensive security solution for all facilities. Administrators gain visibility across their facility footprint and can take proactive action based on insights and data analytics to ensure safe and efficient operations.

Benefits of Brivo Access Enterprise Edition with Data Explorer

- Save time and effort analyzing spreadsheets with built-in Data Explorer visualizations
- Identify utilization trends that can save money and reduce energy use
- Make smarter, data-driven decisions for long-term initiatives
- Improve overall safety by proactively looking for the unusual

Additional Brivo Access Enterprise Edition Features:

- User, group and credential management
- Event tracking
- Device status
- Facility lockdown
- Role-based administrator permissions
- Remote and mobile management
- Video surveillance
- Custom event classification
- Event trend analysis
- API integrations
- Occupancy Tracking
- Identity Connector
- Multifactor Authentication
- Single Sign-on (SSO)
- Global View
- Data Explorer
- Door readers
- Brivo Mobile Pass
- Data reporting retention for 3 years
- Brivo Visitor
- Brivo Snapshot
