Brivo Configuration Guide for Allegion Offline Locks

The Brivo and Allegion Offline Lock integration is a data on card topology using Allegion No-Tour application. The locks do not communicate with either Brivo controllers or services. The cards contain all of the user's permissions. This guide will walk you through commissioning and configuring the Allegion Offline Locks for use with Brivo Access. Allegion Offline Locks with Brivo Access are compatible with Brivo Mobile Pass and Allegion Mobile Pass using Bluetooth.

Obrivo.

Before You Begin

The Brivo Offline Lock integration with Allegion No-Tour supports a variety of Allegion Schlage locks. Make sure that you review the commissioning instructions for the lock model that you are installing. The following are the required parts and tools to successfully use the Allegion Offline Locks with Brivo:

Integration Specifications

The Integration uses a connection between Brivo Access and Allegion Engage for lock management and credential assignment. The integration synchronizes the lock information on a Brivo Engage site inside the Engage platform and then interfaces with the MT20W to write Brivo Access permissions to a credential. Credentials used for the integration are minimum 8K Mifare Classic or MiFare DESFire EV3. MiFare DESFire EV3 is recommended for better credential security.

The following features are supported with the Brivo Offline Lock Integration:

- Up to 11 Devices or Device Groups assigned per credential
- Up to 400 locks per site (Recommended) (Unlimited per account)
- One MT20W required per site
- Adjustable unlock period for Credential Unlock
- Set Unlock period of 3 seconds for BMP Unlock

Parts Required

Supported Locks:

XE360 (T/M/EW) Intelligent lock. (Brivo Part Number: ALGN-XE360-T/M/EW) FE410 Control Lock (Brivo Part Number: ALGN-CTRL-I Interconnected lock) BE467 Control Lock (Brivo Part Number: ALGN-CTRL-D Deadbolt lock) NDE I F

Credentials:

Brivo BUC3 8K credentials

B-BUC3-SF25

B-BUC3-SC50

Allegion smart credentials MiFare 1k byte or larger

Allegion MT20W (Minimum firmware version required - 39.02)

Brivo Access account with Brivo Account Config Tool access

() brivo.

Application Tools Required

Brivo Install mobile app (For commissioning and syncing locks) Allegion Engage mobile app (For commissioning MT20W) Allegion Engage desktop app (used for MT20W in USB mode)

Glossary of Terms

The terms listed below will help you understand this guide better

ACT - Account Config Tool BLE - Bluetooth Low Energy - Communication media used for application management of locks and for mobile credentialing Brivo Access - Brivo's Access Control Management Platform

Offline - Does not communicate to Brivo Access Central or any other platform. Events and updates are done at the credential or via a **BLE** device.

Identifying Your Lock

If you are unsure of which lock model you are installing and configuring just by looking at it, use this section to help you identify the lock model. Although the commissioning and configuration of the locks are very similar, some locks have different features than others.

IMPORTANT NOTE: If you are already familiar with this configuration process, but want to make sure you don't miss any steps, you may use the Offline Lock Configuration walk-through below. For more detailed instructions on configuring Allegion Offline Locks, begin with the Configuring the Brivo Offline Locks with Allegion section.

Configuring the Brivo Offline Locks with Allegion

There is a certain order to successfully configuring the Brivo and Allegion No-Tour integration. Deviating from this order may result in errors.

Brivo Access	Enable the Engage Integration				Add Offine Credentiads Peri	Add Offline redentials and nissions to Users
Brivo ACT		Create a Site to be assed as Offline Site Site for Briel		Cruste Offline Lock Cruste mobile User Broups		
Allegion Engage	Create Engage Account 01 ane closes not exist!		Commission the MT2XW to Offline Site			
Brive Install			Cammission the Lachia)	J	u	pdate locks as required
Partner Portal	L,	Create a Size to be used as Offline Size Size for Brite)				

Consideration during Configuration

- 1. Ensure the correct offline lock naming convention is agreed upon before starting.
 - a. If the lock names need to be changed after the fact, then factory defaulting will need to be performed on all the locks and repeating the necessary steps below will be required.
- 2. If using the Allegion 9691T fob with Brivo Smart Readers, a High Frequency Disable Card is required. Brivo Readers are not compatible with the Allegion Smart 13.56Mhz format in the Allegion 9691T fob. This will eliminate a double read at each Brivo reader which results in one successful and one failed read. Be advised that this will make it so the doors using Brivo readers are only utilizing prox technology.
- 3. If using Brivo Unified Credentials, the ALGN-CFG-BUC (CE-052-861) Configuration card will need to be applied to all MT20Ws and locks.

Configuring Allegion Hardware

Physical Installation of Allegion Offline Lock

Follow Allegion's instructions to install the offline locks on the doors.

Enabling the Engage Integration in Brivo Access

NOTE: In order to complete this process, you must first download the Allegion Engage app from Google Play or Apple Store.

NOTE: Follow the instructions provided by Allegion on creating an Allegion Engage account found within the app. You do not need to create a site within Allegion Engage. One will be created as a part of the Engage Integration.

1. In Brivo Access, select **Configuration** and then **Integrations** on the left navigation bar. The Integration Library page displays.

- 2. Within the Integration Library, you will see Engage Offline Lock as an available integration. Select the tile to configure the login information for your Engage account.
- 3. Once you have the Integrations Details open, click **Enable**.

Available						
Eagle Eye Videa		Engage Offline L Intrusion	ock	Single Sign On Conne SSO Login	ctor	
	Integrations					
	Integration Brigge Office Locks	Details			() Emilie	
		Engage Offline Locks Mingos Engage Program Car Information Information And Antonio on Products 11 Washington, No addition and	an ann an	occurrent and tradeministry		
		Created Suggest gland loss de 12 Mag erriel Subsidiation				

4. Next, you will see the login credentials fields. The next step is to enter the Engage credentials associated with the Allegion Engage account where you want to associate the locks.

5. Next, click **Save**. If the login credentials are correct, you will see that your Engage account is now connected. You will also notice that the Engage Integration has been moved to Enabled Integrations. You can now start creating an Offline Site to which you can add the locks.

Configuring a Site in Brivo

There are two options to create a site in Brivo. Option 1 utilizes Brivo's Partner Portal. Option 2 utilizes the Account Config Tool. If you are a reseller with a Partner Portal login, it is recommended that you use Option 1.

Option 1 - Configuring a Site in Partner Portal

NOTE: You may utilize an existing site or create a new site for Offline Locks.

NOTE: If utilizing an existing site, jump to Register an Offline Lock Site below.

If creating a new site:

- 1. Click on the **Customers** link on the left navigation bar.
- 2. Select your customer from the list.
- 3. Click on the **Sites** link in the account summary pane.

Credentials	5	Panels	6
Cameras	2	8 Visitor Kiosks	1
E Doors	5	Sites	2

4. Click on the **Add Site** button.

Add a Site

Sites added to this account will appear here.

Add Site

- 5. Fill in the site name, address, and timezone.
- 6. Select "Offline locks will be used on site" in the Site Configuration dropdown.
 - a. If you do not see the Site Configuration dropdown, ensure that you have successfully enabled the Engage integration as described on page 5.

Add Site		
Name *		
Address *		
Address 2		
City*	State/Province *	
Postal Code *	Country *	
Timezone *		
She Configuration		
Offline locks will be used on sife	37.	

7. Click Save Changes.

Registering an Offline Site

- 1. Click on the **Customers** link on the left navigation bar.
- 2. Select your customer from the list.
- 3. Click on the **Sites** link in the account summary pane.
- 4. Click on the **View** link for the site you want to register.
- 5. On the Site Details page, select "Offline locks will be used on site" in the Site Configuration dropdown.
 - a. If you do not see the Site Configuration dropdown, ensure that you have successfully enabled the Engage integration as described on page 5.
- 6. Click Save Changes.

Option 2 - Configuring a Site in the Account Configuration Tool

NOTE: You may utilize an existing site or create a new site for Offline Locks.

NOTE: If utilizing an existing site, jump to Create an Offline Lock Site below.

- 1. If creating a new site:
 - a. From the left navigation bar, select **Account Config Tool.**
 - b. Within the **Account Config Tool**, create a site to which the Control locks will be associated.

c. Once in the Account Config Tool, go to **Setup->Sites/Doors->Sites** and click on the **New Site** button.

SETUP 🔻	JOURNAL	HELP	
Account	×		
Cards	•		
Sites/Doors		Sites

d. Create a new site in the account as per normal and when finished, click **Save Site**.

Creating an Offline Lock Site in Brivo

NOTE: This step is for use with an existing site in Brivo.

1. Once in Brivo, go to **Setup->Sites/Doors->Sites** and select the site you want to use.

SETUP 🔻	JOURNAL	HELP			
Account	۱.		Jump ∧ B ⊂ D E F	• • + 1 J K L M H O P 9 R 5 T 9 V W X Y Z	
				Site Name	Address
Cards	•		9	Bethesda Office	Bethesda, MD
			•	Brivo Apartments	Bethesda, MD
Sites/Doors		Sites	Ŷ	Kansas City	Kansas City, MO
Schedules	•	Control Panels	۹	Miami Office	Miami, FL
				Offline Lock Site Name	Bethesda, MD
Notifications		Unlock Door		CONSIGNATION CONTRACTOR	

2. Once on the **View Site** page, click on the **More Operations** button and select **Associate Offline Locks**.

3. Follow the prompts to register this site in the Allegion Engage account.

NOTE: Step 3 will utilize the Engage Credentials entered above in **Applying Allegion Engage account credentials**.

4. Once completed, a message will appear showing a successful registration. Brivo will now create this site in the associated Allegion Engage account. It is recommended to log into the associated Allegion Engage account to confirm that the newly created site is listed.

NOTE: (after completing site creation) An email will be sent to the email address registered with Allegion Engage on page 5. Click **Accept this Invite** in the email to confirm site registration. The site will not be listed in the Engage application until the invite is accepted.

Commissioning devices using the Allegion Engage and Brivo Install mobile apps

Using the **Allegion Engage** mobile application, you must now commission the MT20Ws to the site. Find the site name that Brivo created and commission the MT20W.

Commissioning the MT20W

In the Engage mobile application, follow the prompts to commission the MT20W.

- 1. Plug the MT20W into the computer that you will be using the Allegion Engage Desktop App with Brivo Access for writing to credentials
- Even if new out of the box, it is recommended to default the MT20W using the included CE-000-040 Mt20x Factory Default Reset card. To do so, present the config card to the MT20W within on minute of power-up. Hold it in place until complete. Three beeps followed by a reset of the MT20W will indicate success. It is best practice to run through the default process twice.
- 3. If using the MT20W with the Brivo Unified Credential, this is a good time to present the ALGN-CFG-BUC (CE-052-861) to the reader using the same process as the Factory Default.
- 4. Within the Engage App, navigate to the site and select the + at the top right corner. In the next screen, select the MT20W from the list.
- 5. When the app locates the MT20W, it will display in the list. Verify the serial number of the MT20W and select it from the list. The next screen will ask you if the Blue light is blinking on the MT20W. If so, you are ready to continue. Select **Yes**. On the next screen you will be asked **Which data transfer method are you using?**, select **USB**.
- 6. When you reach the step to enter the access software IP details, enter the following configuration:
 - a. **Configuration**: DNS
 - b. Server Name: allegion.brivo.com
 - c. Security: Secured

Once this information has been successfully entered, a confirmation screen will appear.

7. Tap the **Send Link** button to receive an email with the MT20W desktop application. This is required when setting up credentials.

NOTE: The link will be sent to the email address associated with the account that is currently logged in.

Commissioning Offline Locks

In the Brivo Install mobile application, follow the prompts to commission Offline Locks.

NOTE: This will require the use of the Brivo Install Mobile Application. If you have not done so already, please download the application through Google Play or Apple Store.

NOTE: Brivo Install version 2.0 is used in these instructions. The login procedure is different for older versions of the application.

NOTE: Before you commission any lock, it is a good idea to factory default the lock. Refer to the FDR instruction in the Allegion Installation Guide for the lock you are commissioning.

NOTE: Locks cannot be commissioned to a site if those locks:

- a. Exist on another account on a different system.
- b. Exist on a different Brivo Account or Site.
- c. Have been removed from a previous Engage account attached to Brivo but have not been synchronized.
- d. Have not been Factory Defaulted after removing from existing account or site.
- 1. Open the Brivo Install application. The application has two separate logins. One for Brivo Smart Home and one for Control Lock. Select **Control Lock** from the bottom of the screen.
- 2. Log in using the email address associated with your Brivo Access account. Once you select **Login**, you will be prompted for your password.
- 3. Once you have logged in, select the **Account** that you are working with and select **Go To Account**.
 - a. Only applies if you have a login to multiple Access accounts.
- 4. Next, select the site where you want to add your locks. This should be the same site where you previously commissioned the MT20W.

5. Tap the **Create Offline Lock** button. You will then select the device type. The Brivo Offline Lock integration supports both Control and XE360 lock sets.

IMPORTANT NOTE: It is not recommended to share Brivo Install logins across multiple mobile devices. Sharing credentials will result in an IP block which may cause lock commissioning failures. You will see an in-app warning with this information prior to commissioning your first lock. Tap **I understand**.

- 6. Tap through the Commissioning Tutorial.
 - a. Tap **Don't show the tutorial again** to skip this step in the future.

7. The Brivo Install app will scan for devices in range. Select your device from the list provided.

8. On the next screen you will give the device a name. Make sure that you give the name that you will be using for the site. If you ever need to rename the lock, you will need to completely remove the lock and recommission the lock.

- 9. The Brivo Install app will finish preparing your device and display a notice of successful configuration. You may either **Add** another device or Finish by selecting either option.
- 10. Your new Offline Lock now displays in the Brivo Install app.

ovrvo)

Creating and Assigning Device Groups to Locks

A device group is used if there is a need for a master credential (one that can be used across many locks). This section will provide the steps needed to create and assign a device group to a lock. It is recommended (but not required) to perform this step before setting to No Tour Address on the lock(s).

IMPORTANT NOTE: You must assign the device group(s) to your card(s) for them to work correctly with locks in a device group.

- 1. Go to the **Setup -> Sites**.
- 2. Find the control lock under the **Offline Device Name** section.

3. Click on Add + at the far right of the page. This will bring up a new popup window.

4. If you need to create a new device group, enter a name and click the **Create and Add** button.

5. You may instead select an existing group from the list.

6. Once you have added (or created and added) your device group, you will see that the group shows up in the Lock Details

NOTE: An Allegion Offline Lock can only be associated with a maximum of 16 device groups.

7. A group may be removed from the Offline Lock by clicking on the **X** within the label of the lock. A Group may be deleted permanently by selecting **Delete** in the ADD TO DEVICE GROUP pop-up.

Create New Group	0	eate and Add	1 of 16 groups assi	gned.

Obrivo. User and Permission Setup

Adding Cards for Use with Offline Locks

This section describes adding card to the Brivo Card Bank and setting them for use with both online and offline locks.

NOTE: Cards need to be added to the Brivo account in a specific fashion. If you plan to use any supported Allegion smart cards that have been previously added, they must be readded.

1. In Brivo Access, select **Credentials** from the left navigation bar. The Card Bank displays. In the Card Bank, click **Add Cards**. An **Add Cards** pop-up window will display.

- 2. In the **Add Cards** pop up window, you will select the card format. The supported Formats are Standard 26 bit, HID 37 bit and HID 37 bit w/ Facility Code.
- 3. Next you will enter the card range by entering the first and last card numbers. You will then check the **These** cards will be used with offline locks checkbox. Finally, click Add Cards.

E Add Cards		>
Card Format *		
HID 37 Bit		~
First Card Number *	Last Care	d Number *
10001	10050	
Set an Optional Card	d Offset used with offline	locks
	Cancel	Add Cards

4. You should see a confirmation that your cards were added. Only when **These cards will be used with offline locks** is selected can the cards be used with Offline Locks.

Cards	added successfully	×
	HID 37 Bit	
	10001 - 10050 (50 cards total)

Associating a Card to a User under Offline Lock

NOTE: Before associating a card, be sure to have the Engage MT20W desktop application open and displaying that the reader is connected.

1. To set up a card for a user, navigate to **Users**->**Users** and then select their **User Profile**.

2. Once on their **User Profile** page, click on the **Offline Lock** tab.

3. Within the Offline Lock Permissions screen, you will first select the card to program. Click on the **Select** button. You will then select your **Card.**

Select a new card	Select

NOTE: Each card has a limit of eleven (11) single devices or device groups to which it can be assigned.

Setting Permissions

Once permissions have been added to the card, a legend will display showing the different permission types.

elect a new card	10000	Select		
elect site	Offline Lock Site Name	Select		
elect permissions	1 of 11 permissions assigned	Select		
				Permission synchronized
	○	•	Permission will be added	
			Unit 101	Permission will be suspended
			and w	Designates a group of devices
				Designates a single device

- Green: Permission added
- Yellow: Permission is suspended
- Gray: Permission already added

Green signifies the permissions you are currently adding.

Yellow signifies the permissions you are suspending or reinstating.

Gray signifies permissions already on the card.

After setting permissions on a credential, there are additional steps that must be followed depending upon the type of permission.

Permission Type	Description
Adding permissions only	Set up the credential using the MT20W
	Set up the credential using the MT20W
Suspending permissions	OR
	Update the Offline Lock using the Brivo Install Mobile Application if immediate action is required or there is no access to the credential
	Set up the credential using the MT20W
Removing permissions	AND
	Update the Offline Lock using the Brivo Install Mobile Application
	Set up the credential using the MT20W
Reinstating permissions	AND
	Update the Offline Lock using the Brivo Install Mobile Application

Updating the Credential on the MT20W

1. Once you have finished setting up the device permissions on the card, click on the **Update Credential** button. A confirmation pop-up will appear.

(3)	Confirm update
Unit 101 Add 🗸	Your card will be updated once you click yes and place the credential on the MT20W. It is also recommended to update the Control lock using the Brivo Mobile Application. Are you sure you want to continue with the update?
Cancel Update Credential	Yes No

- 2. Brivo Access will send the permissions to the card on the MT20W.
- 3. Ensure that you have the Engage desktop application open and place the card on the MT20W. The MT20W will beep while accepting the card followed by a solid green. When the MT20W is done writing to the card you will hear three beeps with three green LED flashes. If you see red, refer to the Error Codes and Troubleshooting sections.
- 4. Congratulations, you have successfully set up the card for use at the selected Offline Lock(s).

Error Codes for the MT20W

If there is an issue writing to the card, the Engage App will display certain codes. You will see these on the Engage Desktop app in red at the bottom of the window.

Error 401 - The MT20W has not been commissioned yet. This will require someone to go through the installation process for the MT20W.

Error 402 - The MT20W failed to read the credential that was placed on it. One reason is because the credential was removed too early. Please try again by placing the credential on the MT20W and leaving it through the set up process.

Error 407 - The lock you are applying permissions for does not have an ID set on it. This can be confirmed by viewing the Brivo Access journal at the time the credential was placed on the MT20W

Error 411 - Server error, the MT20W could not reach the services required to update the credential.

Error 417 - Invalid sector, the credential was not successfully written. Position the credential in the upper center of the reader and repeat the syncing process. Do not remove the credential during sync.

Error 426 - Invalid Permissions. This is indicating that either the MT20W or one of the locks is assigned to another site or account. If locks or MT20Ws are moved between Accounts or Sites, they must be removed in Engage and the previous site must be synchronized in the Offline Lock Association window.

How to update the firmware on the MT20W

- 1. Connect to the desired MT20W you wish to upgrade using the Allegion Engage mobile application.
- 2. Tap on **Settings** to adjust the DNS settings.
- 3. You must temporarily change the DNS server name to api.allegionengage.com/ then **Save**.
- 4. Back out to the device home page, tap on **Update Firmware** and long press on **Update**.
- 5. Choose the firmware version you wish to install on the MT20W and follow the prompts to complete the process.
- 6. Once the firmware upgrade is complete, ensure it is up to date under settings.
- 7. Lastly, be sure to change the DNS address back to allegion.brivo.com as listed on step 2 of Commissioning the MT20W.

Syncing Changes to Offline Locks

After changes have been made to lock permissions, you will need to sync those changes to the lock using the Brivo Install app.

NOTE: Brivo Install version 2.0 is used in these instructions.

- 1. Open the Brivo Install application and login as described on page 11.
- 2. Next, select the site your locks exist in.
- 3. You will then select the lock that you need to sync.
- 4. On the lock details page you will see a message indicating that changes have been made to the lock and updates are available to be synchronized. Tap Update Changes.
- 5. The changes will then be synced to the lock. Once complete you will see a success message.

Adding Mobile Credentials

Configuring Offline Lock with Brivo Mobile Pass

Brivo Mobile Pass allows users to configure Allegion Offline Locks to open doors using mobile credentials.

Assigning Brivo Mobile Pass with Brivo

- 1. To assign a Brivo Mobile Pass, navigate to **Users**->**Users** and then select the user.
- 2. Once the user is selected, go to the **Groups** tab and assign that user to your Control Lock group. Make certain that group has access to the site with your Offline Lock(s). To verify this, you may check the Group Permissions for that specific group under by going to **Users->Groups** and selecting your Offline Lock group.
- 3. If you do not already have a group set up, follow step 3, otherwise, skip to step 4. Click on **Groups->New Group** and complete the standard creation process. Make certain to provide privileges to the site with your Offline Locks before saving.
- 4. Now from the selected user, go to the **Credentials** tab and click the **Add** button next to Brivo Mobile Pass. In the pop-up window, add an **Email Address** and click the **Send** button to send the Brivo Mobile Pass invitation.

NOTE: The Brivo Mobile Pass invitation must be redeemed within seven (7) days. If not redeemed within that period, that Brivo Mobile Pass will need to be revoked and a new Brivo Mobile Pass invitation will need to be sent.

Redeeming a Brivo Mobile Pass with Allegion Offline Locks

- 1. If you have not done so already, download the **Brivo Mobile Pass** app from App Store or Google Play Store.
- 2. Open the email invitation and click on **Add to Brivo Pass**. You may also manually enter the **Pass ID** and **Pass Code** from the app.
- 3. Now that the invitation has been accepted, you should see the Offline Lock listed on the door listing page.

IMPORTANT NOTE: Make sure your **Brivo Mobile Pass** app has Bluetooth turned on, and you are near the Offline Lock while opening it.

4. You may now open the Offline Lock using the **Brivo Mobile Pass** app.

NOTE: To provide a faster **Brivo Mobile Pass** interaction with the Offline Lock(s), please check the Mobile Credential Performance setting on the lock(s). This can be done by connecting to the lock(s) with the **Engage Mobile App** and going to **Settings->Mobile Credential->Performance**. Setting the performance to Max will increase the read range on the lock(s). Please be aware that changing this setting may impact the battery life of the lock.

Configuring Offline Locks with Allegion Mobile Pass

The Allegion Mobile Credential Add-On in an additional subscription to Brivo Mobile Pass. It is not required for all users and the Admin can select which users receive an Allegion Mobile Credential as part of Brivo Mobile Pass.

Assigning Allegion Mobile Pass with Brivo

To issue AMP, follow the normal steps to issue a BMP. Remember to have an email address assigned to the user and to also have the necessary groups assigned to that user.

While issuing the Brivo Mobile Pass, you will have the option to add an Allegion Mobile Pass by simply checking the checkbox as shown below.

Once the user accepts the Brivo Mobile Pass, the Allegion Mobile Credential will automatically be attached. There is nothing additional that the user will need to do.

Appendix Troubleshooting

Offline Lock does not appear in Brivo Access

Verify that the Offline Lock has been commissioned to the correct site using the Brivo Install mobile application.

Verify that the Allegion Engage account credentials have been added to the account.

Synchronize the Brivo Access and Engage accounts.

Offline Lock does not appear in Brivo Install

Verify that the lock appears in Brivo Access. If it does not, follow the troubleshooting step listed above.

Verify that you have an active internet connection and are within range of the lock.

Lock does not appear in range when trying to commission it with the site in Brivo Install

The lock may have been previously installed/commissioned on another site or account.

Make sure to remove it from its current location, factory default it and commission it to the proper site.

Error when syncing the lock

Ensure the phone is within Bluetooth range of the lock.

Repeat the syncing process.

User requires access to more than 11 doors

Create a device group and apply it to the user's credential. Each credential can be associated with up to 11 devices or device groups. A lock can be a part of 16 device groups.

Revision List

Date	Version	Description
November 3, 2020	1.0	Initial version
November 19, 2020	1.1	Updated content
April 28, 2021	1.2	Updated content
July 21, 2021	1.3	Added the Control Lock Configuration Walkthrough
May 15, 2024	1.4	Updated content
November 14, 2024	1.5	Updated Control Locks to Offline Locks and added Allegion Mobile Pass content
February 26, 2025	1.5.1	Corrected the length of time for BMP invitation to remain valid
