

CLOUD SECURITY ALLOWS FOR A SCALABLE SYSTEM AND INCREASED SAFETY FOR A COLLEGE

THE CHANGE

- The Brivo system allows CCC to continue to scale their access control across facilities
- The system allows for creating and managing hundreds of groups with different access privileges
- Dorms are locked 24/7 with controlled access to provide a high level of security for students
- An extra measure of security is provided with limited-access holiday scheduling
- The team can provide controlled access for vendors to come and go from different buildings
- The system provides the confidence that CCC has an effective emergency plan in place

THE CHALLENGE

Central Community College in Nebraska has multiple campuses and educational centers to serve approximately 90 different communities.

- CCC's outdated lock-and-key system and access control technology wasn't meeting their security needs
- On one campus alone there are 26 buildings with access control needs for students, staff and vendors
- The security team had to provide targeted, scheduled access control for about 15 different user groups

THE CHOICE

"From past experience, we knew that great technical support, customer service and quick turnaround time is important. We're completely satisfied with Brivo, as it can scale to whatever and wherever we need. The learning curve was short and sweet."

- Ed Long | Physical Plant Director | Central Community
