

BRIVO GATEWAY

Connect smart apartment/home devices to the Brivo cloud to control it all from your phone

The Brivo Gateway is a tri-band (wired ethernet, WiFi and 4G cellular) communications device that connects the Brivo cloud platform to compatible devices like smart locks, thermostats, lights and water sensors.

Create a mobile, smart automation experience by bringing everything together with the Brivo Gateway. The gateway automatically uses the strongest connectivity channel which provides a highly reliable solution for any connectivity scenario.

The Brivo Gateway is the brain of your smart apartment/home and controls all smart devices in the unit.

APPLICATIONS & BENEFITS

Controls smart devices such as locks, light switches, thermostats, motion sensors, door and window sensors, and freeze and flood sensors

Uses a unique power attachment that secures it to the socket making it difficult to accidentally unplug

Updates remotely via the Brivo cloud platform to access the latest features

Easily installs with a configuration app, Brivo Install, to activate the gateway and pair with Brivo Smart Apartment

TECHNICAL SPECIFICATIONS

Brivo Gateway	
Number of supported devices	Up to 230
Cloud connectivity	Ethernet, WiFi, Cellular
Local connectivity (devices, smartphone)	Communicates with devices using the 900 MHz ISM band
Dimensions	8.5 x 5.5 x 1.25 in
Ship weight	1 pound
Authentication & encryption	End-to-end encryption via TLS based messaging or private network
Power	5V DC Wall adapter included with screw to secure to the wall outlet.

Brivo builds, tests and assembles our gateways because this is a critical part of a unified smart apartment/home solution.
