

WHAT IS THE LATEST FIRMWARE?

Firmware is software that is embedded into hardware devices such as our Brivo control panels. Firmware controls how your devices behave.

Brivo automatically updates the firmware to the latest version when hardware is first connected to our servers. We recommend that you update the firmware on your existing Brivo hardware whenever new firmware becomes available. New firmware often fixes bugs, contains new features, and addresses security vulnerabilities.

The list below will be updated regularly to identify the current recommended version of Brivo firmware.

AS OF 03/10/2025 11:00 AM

Brivo Access Product Line	LATEST FIRMWARE VERSION
ACS6000, ACS300, & ACS100 Control Panels	6.2.5.9
