

Panoramic View:
Better Visibility
Across Your
Facilities Portfolio

Visibility Gaps Impede Facility Safety and Operations

Like most organizations today, you probably look at each facility through a separate lens, each a separate entity from the other, each in a vacuum. Managing security across an entire corporate footprint with multiple locations is a challenge.

You've lacked visibility into the real-time events across your facility portfolio because you rely on a variety of antiquated, disconnected and on-premise solutions that make central access and event visibility impossible.

More and more enterprise organizations are looking to gain a centralized view of their assets to manage security, keep eyes on each facility, and understand property utilization more efficiently through a single lens.

Why Increase Visibility for Security?

Security is facing digital transformation. The scope of the CISO and CSO continues to grow and they are tasked with bringing physical security up to date with the rest of the organization's modernized security practices. In order to mitigate security risks to people, networks, data and facilities and to minimize business impacts, they have to modernize physical security too.

Security Operations Centers (SOC) have expanded into data hubs, consolidating views across networks and physical locations into a single center to manage risk. However, antiquated physical security technology deployed across different locations, even across global corporate footprints, can leave you blindfolded.

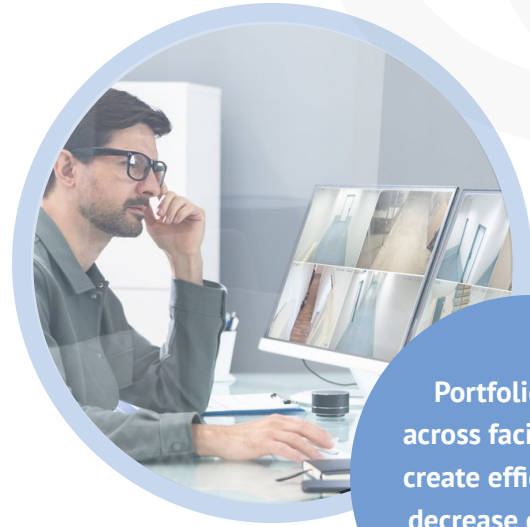

You need an automated way to monitor, see and react to incidents quickly. In the event of a security incident, time is of the essence. Therefore having a global view of your corporate facilities in one single view with real-time data could save you time responding.

Why Increase Visibility for Facility Management?

Corporate asset leaders, facilities directors, and real estate portfolio managers need to understand what's happening across their organization's physical footprint while maximizing building efficiency. Centralized asset management allows these leaders to make real-time facility utilization decisions.

Organizations that have a global view of their facilities and can understand real-time utilization and identify where they can cut costs, save energy, and staff appropriately to the demand to manage facility operations more efficiently.

Portfolio views across facilities may create efficiency and decrease operating costs.

Brivo Access Enterprise Solution

To help you gain global visibility across all the buildings and facilities in your physical footprint, Brivo Access Enterprise Edition with Global View delivers real-time insights on a global level to keep your employees, tenants and residents safe and maximizes your facilities' operations and efficiency.

Global View is a feature within Brivo Access Enterprise edition that places all facilities on a map for quick access and easy understanding of what is happening at different locations. You can identify which facilities need attention. You can also determine if an alert is malfunctioning equipment or an unusual trend that the facility management team needs to prioritize—even before a help ticket is issued.

However, with Global View, you get more than just a map. You get real-time insights that you can drill into on a broad scale and the ability to correlate and prioritize alerts that have the most significant impact.

Key Benefits

Brivo Access for Enterprises

Brivo Access Enterprise Edition is an enterprise-grade access control solution designed for businesses with multiple access points. This advanced edition provides a comprehensive security solution for all facilities. Administrators gain visibility across their facility footprint and can take proactive action based on insights and data analytics to ensure safe and efficient operations.

Benefits of Brivo Access Enterprise Edition with Global View

- Decreased response time via a singular view of real-time alerts across all physical locations, no matter how far apart
- Improve employee, tenant and resident safety and overall experience
- Optimize operations and staffing requirements when you centralize facility management across geographies
- Reduce overall facility costs with a global view of facility operations and utilization

Additional Brivo Access Enterprise Edition Features:

- User, group and credential management
- Event tracking
- Device status
- Facility lockdown
- Role-based administrator permissions
- Remote and mobile management
- Video surveillance
- Custom event classification
- Event trend analysis
- API integrations
- Occupancy Tracking
- Identity Connector
- Multifactor Authentication
- Single Sign-on (SSO)
- Global View
- Data Explorer
- Door readers
- Brivo Mobile Pass
- Data reporting retention for 3 years
- Brivo Visitor
- Brivo Snapshot
