

Cloud-Based Access Control Solutions for Software Companies

The Brivo Edge: It Takes One to Know One

Brivo, an early innovator, developed cloud-based access control in the earliest days of cloud computing. Since then, we have continued to build, hone and optimize our suite of solutions in step with the evolution of the technology and the market. Other providers are struggling to catch up, or grafting a cloud solution on a legacy on-premises approach.

As a Software-as-a-Solution provider ourselves, we understand the unique needs, concerns and constraints of your business environment.

CHALLENGE	THE BRIVO SOLUTION
 <p>Managing a mobile and dynamic tech workforce</p>	<ul style="list-style-type: none"> • Mobile management and credentials that can add, update, and delete users, access points, facilities, and permissions instantaneously • Integrated access control and digital identity and access management (IAM)
 <p>Cybersecurity and compliance issues</p>	<ul style="list-style-type: none"> • We build our software, deploy our applications, and manage our business with the most rigorous cybersecurity protocols and policies • We secure sensitive data in the cloud, validated by our Cloud Security Alliance (CSA) STAR attestation designation • We certify our systems to SOC 2 Type II audits, a critical security standard, by an independent auditor

CHALLENGE	THE BRIVO SOLUTION
 <p>Obtaining access and other relevant data</p>	<ul style="list-style-type: none"> • We build a business intelligence tool into our platform for advanced analytics • A map-centric multisite display enables administrators to zoom into individual facilities to assess usage patterns and risks • Hundreds of API integrations enable you to expand connectivity and develop your ecosystem • Event trend analysis identifies patterns and anomalies in your access data
 <p>Leveraging access data for improvements and efficiencies and to drive key decision-making</p>	<ul style="list-style-type: none"> • With Brivo data, clients achieve more efficiency in enhanced space utilization, room scheduling, lighting and power usage, lobby staffing, workspace assignments, and package deliveries • Data detects anomalies, identifying possible security issues such as insider-threat activity • Security can deliver data to and connect with departments such as supply chain, operations, compliance, and HR
 <p>Managing remote office space</p>	<ul style="list-style-type: none"> • Access and facility usage data maximize efficiency of office resources
 <p>Facilities have legacy on-premises access control systems</p>	<ul style="list-style-type: none"> • Legacy access systems and hardware are compatible with cloud-based systems • Cloud-based systems allow you to scale and flex as your requirements change
 <p>Providing insights to the C-Suite</p>	<ul style="list-style-type: none"> • Access and related data empower C-suite to make key decisions, demonstrate security control, and show value for security
