STAFF AND PARENTS
OF PRIVATE SCHOOL
GAIN PEACE OF MIND
AND ADDED SECURITY

THE CHALLENGE

Appletree School is located near a Washington, DC, Metro station, making it convenient for parents and staff but also posing security risks.

- Appletree used the lock-and-key system and staff monitored the front door but had other duties
- The school was in the path of going to and from the Metro, increasing the risk of unauthorized visitors
- The school had limited financial and technical resources for an access control solution difficult to keep track of who had the keys

THE CHOICE

“The parents are very pleased with Brivo Onair—it has given them peace of mind. I can access the system from my home computer on snow days. We really do like that.”

-Beckii Pittman | Administrator | Appletree School

THE CHANGE

Brivo Onair was installed and parents and staff were assigned PIN codes. Administrators can monitor activity and manage access from anywhere, anytime.

- The Brivo Onair access control system provides security and valuable peace of mind
- The system can be managed remotely to prevent doors from unlocking when school is cancelled
- School administrators can manage door access easily and through one interface
- Teacher and staff productivity has increased by allowing school access before and after hours
- Brivo manages IT maintenance, eliminating the need for expensive IT resources and expertise
- Lower upfront system and installation costs mean more funds available for student resources
