Get in Faster with Android

Offer an even simpler way to get around the office without having to unlock a phone or open an app by adding access credentials to Google Wallet. Provide employees a frictionless workplace experience with just a tap from their Android phone.

*only supports Android OS 8 or later

Easy to Deploy and Manage

By adding access credentials to Google Wallet, you can streamline key distribution and management across your entire organization.

- Distribute mobile credentials remotely in just a few simple steps

- Deliver and store credentials directly in Google Wallet on an Android phone

Secure Credentials in Your Wallet

Google Wallet's advanced security features and easy-to-use privacy controls keep information private and secure. Mobile credentials can't be stolen, duplicated, or removed from the wallet other than by the authorized user or the admin.

Support Sustainable Initiatives and Eliminate Plastic Waste

Reduce administration costs and waste associated with physical card distribution by replacing them with digital credentials. Minimize environmental impact and take steps toward an ESG-friendly workplace with an eco-friendly solution.

Simple to Activate on Android Phone

1
Download the Brivo Mobile Pass app

2
Complete the Activation Steps

3
Tap Add to Google Wallet within the app

Easily activate, suspend, or permanently deactivate mobile credentials with Brivo Access, or with the okta and Azure integrations.
